Grand Seiko 'Yuka Momiji' Mechanical Hi-Beat GMT

SBGJ273

RRP £6,700 incl. VAT

MOVEMENT

Accuracy

-3/+5 seconds per day

Calibre

9S86

Movement Type

Automatic with Manual Winding

Power Reserve

55 hours

EXTERIOR

Case Diameter

39.5mm

Case Length

46.9mm

Case Thickness

14.1mm

Lug Width

19.0mm

Case Material

Stainless Steel

EXTERIOR

Dial Colour

Red

Strap/Bracelet

Stainless Steel

OTHER

Water Resistance

Splash Resistant

Crystal Coating

Anti-reflective coating on inner surface

Crystal Type

Box shaped sapphire crystal

Other Specifications

Calendar-linked time difference adjustment function, 24-hour hand (dual time display function), 37 jewels

Watch Function

GMT

Grand Seiko 'Yuka Momiji' Mechanical Hi-Beat GMT

SBGJ273

RRP £6,700 incl. VAT

The dial design of this Hi-Beat timepiece has been designed to express the unique beauty of Japanese nature and culture in coexistence. Powered by the handcrafted in-house mechanical Calibre 9S86, its power reserve of 55 hours, accuracy rate of +5 to -3 seconds per day and GMT hand ensures high precision across multiple time zones.

The dial is inspired by Japanese autumnal scenery and traditional architecture where the landscape is reflected onto the floor in a picture projection of the outside world, inside. Over time, the floor in Japanese homes and temples becomes a reflective surface - creating a mirror image of the beautiful view outside. The colour gradations represent the changing of the seasons when the leaves turn red, whilst the vertical patterns symbolise the lacquered wooden floors.

'The Nature of Time' theme features prominently in Grand Seiko watch designs - Japan has a deep affinity with its natural environment, appreciating the way its beauty changes with the seasons. The watchmakers' pride in their surroundings is represented from engineering watch movements which emulate the smooth motion of time passing, to creating dials reflecting the beauty of Japanese nature.

As a true 'manufacture' Grand Seiko incorporates the latest in-house technical developments alongside its breadth of craftsmanship in all watch movements – it is unique as the only vertically integrated manufacturer in the world to have mastery of all watchmaking techniques - mechanical, quartz and spring drive movements.

Grand Seiko mechanical watches exhibit a high consistency of functionality in every detail, with around 200 to 300 individual components adjusted by Takumi by hand to tolerances of one hundredth of a millimetre. This extremely detailed craftsmanship ensures the precise watchmaking delivered by the 9S mechanical movement.

Grand Seiko: high standards of precision, durability and legibility, handcrafted in Japan by Takumi artisans.
